

## ALUSTAR ALUMINIUM SYSTEM SCAFFOLD HIGHLIGHTS

Alustar production is a complete Norwegian value chain, from the aluminium alloy to the final components. As the only industrial scaffold, Alustar is produced with special patented technics avoiding welding.

The aluminium scaffold is a cross industry product developed on request for Ekofisk field in 1994. Today Alustar aluminium has found its application both in on- and offshore oil and gas industry, as well in construction and other projects for secure and productive access.

Alustar factory situated strategic next to Stavanger Airport and 10 km to harbour and oil base Risavika. With 20.000 m<sup>2</sup> of land, Alustar can handle all logistics for both customers -, and our own rental stock.

Alustar aluminium system scaffold is a flexible access system for both easy and complex structures in addition to special features for suspended scaffold not at least offshore.

Alustar can also take on tailor made solutions according to customer's special needs exemplified by solutions for tanks of any kind and rail recently delivered to Ekofisk field.

Our User Manual is delivered according to customer needs in several languages, and Alustar perform both in and ex-house training.

Alustar system is Type approved to the latest European Norm (EN 12810).

Alustar commitment to HSE and Continuous Improvement is proven through years of work with new directives and standards in the Norwegian scaffolding industry association, and now as member of NASC, The National Access and Scaffolding Confederation in UK.
